SawControl

Project code: EFRE1069 - CUP: B27H240050007

Project duration

01/2025 - 10/2027

Total partner cost

776.817,36 €

EU funding

310.726,94 €

The project aims to develop an intelligent planning system for small and medium-sized sawmills, with a strong focus on optimizing production efficiency. By analyzing the entire production chain through machine learning, SawControl helps optimize raw material usage, reduce waste, and improve product quality. It enables production planning that maximizes the value of the wood and supports the analysis and optimization of major deviations between planned and actual results.
