

Mill Manager

Overall analysis, monitoring and planning solution from log to final product

Customer benefits

- ✓ Quality distribution analysis
- ✓ Value deviation and possible root cause detection
- ✓ Production, performances and efficiency monitoring
- ✓ Production optimization and analysis

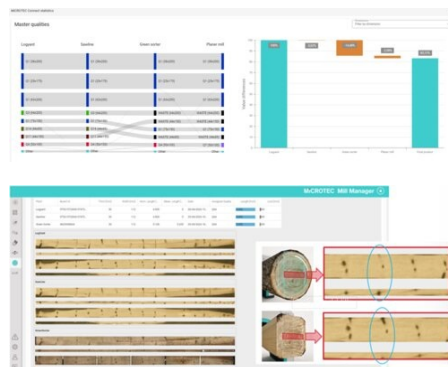

The dashboard suite provides complete monitoring and analysis of product quality and value deviations throughout the workflow, ensuring transparency of product-related data. Planning tool for production outcome optimization. It supports the production planning with real time data.

Quality Distribution forecasting and monitoring

Mill Manager combined with the MiCROTEC Connect creates the unique possibility to forecast the quality distribution in the production with a complete monitoring tool of quality deviation inside the process.

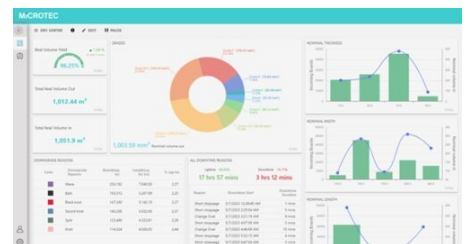

Monitoring

Monitoring of KPI and performances based on customer defined targets. Analysis of production days and shifts to improve reaction performances on production issues.

Deviation analysis

Mill Manager supports the quality responsible to identify deviations to the original forecasted quality. This supports and enhances a continuous improvement process in the mill.

Modern Web based Design

Modern Web based design allows intuitive navigation in the system. A flexible creation of dashboards allows easy creation of visualizations and reports, accessible from different devices.

Features

-
- ✓ Flexible Reporting
-
- ✓ Shift planning
-
- ✓ Process related alarm handling
-
- ✓ Value normalization through the process
-
- ✓ MiCROTEC Connect
